

GH-300 – GitHub Copilot

Trainer Delivery Guide (Scale)

Version: 1.1

Revised Date: 19/3/2026

Course

GH-300 – GitHub Copilot

Delivery Modality

Scale delivery – Lecture & demo driven

Platform - Teams meeting

Delivery Duration

3 hours total (180 minutes, including two 10-minute breaks)

Audience

Min/Max attendees - 50 – 200 attendees

- Software developers (beginner to intermediate)
- Technical leads and engineering managers
- Developers new to GitHub Copilot

Prerequisites

- One or more years of code development experience is recommended.
- Basic understanding with GitHub fundamentals
- Prompt Engineering best practices knowledge is recommended.

Technical Depth

- Foundational product usage
 - Developer workflows and productivity
 - No deep setup, no environment configuration
-

Delivery Principles (for Trainers)

- No labs
- No breakout rooms
- Minimal open discussion

- Keep microphones muted by default
 - Demo-led storytelling only
 - Scripted, repeatable demos
 - Focus on **developer workflow impact**, not syntax mastery
 - Use Teams reactions (👍 🗨️ ✅) instead of verbal responses
 - Chat used only for guided prompts (trainer initiated)
 - Avoid live troubleshooting or environment setup
-

Positioning

- **GH-300** = foundational GitHub Copilot understanding
 - **AZ-2007** = deeper developer execution (follow-on)
-

High Level Flow (Break Adjusted)

Segment	Time
Welcome & framing	10 min
GitHub Copilot fundamentals & product model	25 min
Responsible AI & validation mindset	30 min
BREAK	10 min
Core developer workflows (demo led)	45 min
BREAK	10 min
Testing & quality workflows	25 min
Wrap up & next steps	25 min
Total	180 min

High Level Flow (Break Adjusted)

Segment	Time
Welcome & framing	10 min

GitHub Copilot fundamentals & product model	20 min
Build application with GitHub Copilot	30 min
BREAK	10 min
Develop unit tests using GitHub Copilot	20 min
Accelerate development with GitHub Copilot coding agent	30 min
BREAK	10 min
Streamline code review and pull request	25 min
Wrap up & next steps	25 min
Total	180 min

Detailed Trainer Guide

1. Welcome & Session Framing (10 minutes)

Trainer Focus

- Set expectations clearly upfront
- Position GH-300 as **Copilot fundamentals**, not advanced setup
- Explain scale delivery norms (demo-led, no labs, chat only)

Key Talking Points

- GitHub Copilot supports developers — it does not replace thinking
- Focus is daily developer workflows, not configuration
- Deeper execution and hands-on comes later (AZ-2007)

Teams Interaction

-  Chat (guided):

Role today? Developer / Lead / Manager

-  Reaction check: Used GitHub Copilot before?

2. GitHub Copilot Fundamentals & Product Model (25 minutes)

Objective

Build a clear mental model of where GitHub Copilot fits in developer work.

Core Topics

- Where Copilot shows up (IDE suggestions, inline chat)
- Suggestions vs Chat usage
- Typical developer flow:

Idea → Code → Test → Document → Review → Iterate

- Individual vs team productivity mindset

Delivery Style

- Lecture with simple workflow diagrams
- No installation or setup walkthroughs

Teams Interaction

-  Chat (guided):

Do you rely more on suggestions or chat today?

3. Responsible AI & Validation Mindset (30 minutes)

Objective

Establish safe, effective Copilot usage habits.

Core Topics

- Copilot output is a starting point, not final truth
- Risks:
 - Incorrect logic
 - Security gaps
 - Bias
 - Over-reliance
- Importance of validation, testing, and review

Trainer Guidance

- Show weak output → refined prompt → validated result
- Emphasize developer accountability

Teams Interaction

-  Reaction poll:

Biggest risk today?

Security / Logic / Bias / Over-reliance

BREAK (10 minutes)

Trainer guidance:

- Clearly state return time
 - Restart on time to protect demo flow
-

4. Core Developer Workflows (Demo-Led) (45 minutes)**Objective**

Demonstrate where Copilot saves time in everyday development.

Demo Strategy

- Live, scripted demos
- Narrate thinking and decision-making
- Avoid long typing or debugging

Suggested Demo Sequence

1. Code generation from a clear comment
2. Refactoring for readability and structure
3. Generating documentation or README content

Trainer Rule

Never pause to troubleshoot.

If a demo fails → switch immediately to screenshots or narrated storytelling.

Narration Focus

- Why Copilot helps here
- Where time is saved
- What still requires human judgment

Teams Interaction

- 👍 “Thumbs up if this would help you tomorrow”
- ✅ Chat (guided):

Where do you lose the most time today?

BREAK (10 minutes)**Trainer guidance:**

- Clearly state return time
 - Restart on time to protect demo flow
-

5. Testing & Quality Workflows (30 minutes)

Objective

Show Copilot's role in improving quality, not just speed.

Core Topics

- Test generation
- Fixing failing tests
- Code explanation and review
- Security-aware thinking

Suggested Demo

- Generate unit tests
- Show test failure → Copilot-assisted fix → passing test

Teams Interaction

- ☒ Reaction poll: Tests easier with Copilot?
- ☒ Chat (guided):

What part of testing slows you down most?

6. Wrap Up & Next Steps (25 minutes)

Key Takeaways

- GH-300 builds GitHub Copilot fundamentals
- Copilot accelerates daily developer workflows
- Responsible use and validation are essential

Next Steps

- Encourage applying Copilot to one real workflow this week
- Position **AZ-2007** as the deeper execution follow-on

Close Interaction

- ☒ Chat (guided):

One workflow you'll try Copilot on this week

- Thank learners and end on time
-

Trainer Do / Don't Summary

☒ Do

- Keep demos stable and scripted
- Narrate decisions and workflow impact
- Reinforce validation and responsibility
- Use Teams reactions and guided chat prompts

✗ Don't

- Perform live environment setup or troubleshooting
- Dive into deep configuration or licensing
- Allow open-mic Q&A
- Overrun demos

Moderator Guidance

Moderator roles and responsibilities can be found at the following locations.
